Achieving an A* in A Level chemistry is difficult – only around 1 in 10 students achieve this grade each summer. Contrary to popular belief, you don't need to be a chemistry-loving genius that eats, sleeps and drinks the subject 24/7 to get an A*, rather, it takes a lot of hard work and careful preparation that should start from day one.

Our Chemistry Connection to Stars and the Cosmo WRITTEN BY: Daniel Duan A common entity that connects everything from majestically looking galaxies and nebula to the enormously diversified biosphere on our planet is the thin cloud of molecules and particles in the void of our universe.

Our Chemistry Connection to Stars and the Cosmo ...

Most astronomical telescopes are outfitted with spectrometers. These devices examine the color of light from a star in very fine detail. The lack of certain colors, known as Fraunhofer lines or ...

How can chemists study the composition of distant stars ...

As a clump compressed, its center would become dense and hot enough to start fusing hydrogen nuclei—that is, protons—together, releasing energy, and giving rise to a new star. According to scientists' best estimates, stars began forming 13.6 billion years ago, 200 million years after the Big Bang. Gold was still nowhere to be seen.

The Secret Life of Gold - American Chemical Society

the chemistry of diamonds newsela answers, The chemistry of diamonds. Diamonds, a beautiful gemstone that everyone knows. The diamond is formed when carbon is put under intense heat and pressure. This normally happens under the earth's surface, but diamonds don't just come from earth. Diamonds can come from stardust, the remanence of deceased stars.
