Architectural Space in Ancient Greece. In his first book, Doxiadis' view of the architectural and urban past of ancient Greece approximates to the urban thinking of the great moderns of the inter-War period. The encounter revolved around the prospect of formulating the principles of contemporary urbanism as applied in theory and practice, and as they were projected onto the city of the future.

Abstract. This research uses vision as a methodological tool in order to highlight the relationship between vision and architecture as represented through Constantinos Doxiadis' dissertation which analyses architectural space in ancient Greece using a system of visual angles. This relationship designates Doxiadis' association with a broader philosophical environment of the European between-wars era where theories concerning the aesthetic dimension of vision are at the forefront.
