The dynamics of these large-scale multibody systems are highly nonlinear, presenting complex problems that in most cases can only be solved with computer-based techniques. The book begins with a review of the basic ideas of kinematics and the dynamics of rigid and deformable bodies before moving on to more advanced topics and computer implementation.

A multibody dynamic (MBD) system is one that consists of solid bodies, or links, that are connected to each other by joints that restrict their relative motion. The study of MBD is the analysis of how mechanism systems move under the influence of forces, also known as forward dynamics. A study of the inverse problem, i.e. what forces are necessary to make the mechanical system move in a ...

RecurDyn can model multibody dynamics systems interacting with control systems to represent complex mechatronic systems. RecurDyn/CoLink provides an integrated solution with a control system development environment. RecurDyn/Control, on the other hand, offers an interface to Matlab/Simulink, Amesim, and also supports the FMI protocol.
