Materials fatigue performance is commonly characterized by an S-N curve, also known as a Wöhler curve. This is often plotted with the cyclic stress (S) against the cycles to failure (N) on a logarithmic scale. S-N curves are derived from tests on samples of the material to be characterized (often called coupons or specimens) where a regular sinusoidal stress is applied by a testing machine ...

The fatigue behavior of brittle polymers is considered in the next chapter. Although the discussion of cyclic deformation and fatigue crack initiation for ductile materials was provided earlier in separate chapters, the corresponding descriptions for brittle materials warrant a single, unified presentation because of the nebulous demarkation between deformation mechanisms and flaw nucleation.
