Tags in Git can be used to add a version number. `git tag -a "v1.5.0-beta" -m "version v1.5.0-beta"` adds a version tag of v1.5.0-beta to your current Git repository. Every new commit after this will auto-increment tag by appending commit number and commit hash. This can be viewed using the `git describe` command.

Tagging practices. As you already know, Git gives you commit identifiers like 1.0-2-g1ab3183 but those are not tags! Tagging is done with git tag, and the tags that are created using git tag are the base for the commit identifiers git describe creates. In another words, in Git you don't tag branches. You are tagging commits.
