The basic picture is one where nature is perpetually out of balance, but organized in a poised state-the critical state-where anything can happen within well-defined statistical laws. The aim of the science of self-organized criticality is to yield insight into the fundamental question of why nature is complex, not simple, as the laws of physics imply.

5. Physics is simple - Nature is complex. Physics has simple laws, while nature is complex. Complex behaviour in nature reflects the tendency of large systems with many components to evolve into a critical state. 6. Self-organized and critical. The out-of-balance critical state leads to avalanches of all sizes.

Nature is the fantastic factory that makes the building blocks of all our lives—food, drinking water, the stuff we own, and the air we breathe. That’s why The Nature Conservancy and its 550 scientists have created Nature Lab: to help students learn the science behind how nature works for us and how we can help keep it running strong.

Nature Lab

Science focuses exclusively on the natural world, and does not deal with supernatural explanations. Science is a way of learning about what is in the natural world, how the natural world works, and how the natural world got to be the way it is. It is not simply a collection of facts; rather it is a path to understanding.

How science works: The Scientific Method is traditionally presented in the first chapter of science textbooks as a simple recipe for performing scientific investigations. Though many useful points are embodied in this method, it can easily be misinterpreted as linear and "cookbook": pull a problem off the shelf, throw in an observation, mix in a few questions, sprinkle on a hypothesis, put the ...
