The vertically-mounted L312 Multi-Level Float Switch is designed to monitor up to five levels on a single device. With only one entry, the L312 can track changing levels within a small tank, as well as monitor liquid interfaces of dissimilar liquids for oil/water separations, chemical emulsions and condensation levels.

The intermediate-sized L180 and large-sized L190 are equipped with a Buna-N float that provides optimum displacement and excellent stability in both oils and water. An optional stainless steel float is also available to accommodate aggressive environments. The two models are rated for system pressures up to 150 PSIG and temperatures up to 180° F.

Solutions with Innovation's float level switches use a float containing an internal magnet and a stem with an encapsulated, hermetically-sealed reed switch. As the float rises and falls with the liquid level, its internal magnet causes the switch circuit to open and close. The non-magnetic stem isolates it from the process.

Float Level Switch Technology & Operation - SWI

Innovative Level Switches operate on a simple and dependable principle. In most level switches, a float device with an encapsulated, permanent magnet is mounted on a stationary stem. In most level switches, a float device with an encapsulated, permanent magnet is mounted on a stationary stem.

Float Switch Applications |

LiquidLevel.com

Float switches have a reed switch and a pivoted magnet and can be used for normally open (N/O) or normally closed (N/C) operation. The switch action can be reversed rotating the switch through 180°. The movement of float, due to changing fluid level, will cause the reed change to work (for instance close or open) at a specific level.
