The installation of the split air conditioners is the most important and crucial part. If it is done properly your air conditioner will give you optimum performance, but if it is not done properly you won't get the desired cooling effect and there may be frequent maintenance problems of which the most prominent can be the gas or refrigerant leakage.

Split-system air conditioners are designed to cool one specific place in your home. They work in a similar way as whole-house HVAC units. Split-system air conditioning units have an outside unit that dissipates heat from the area the system is cooling. The indoor part of the system blows cool air into the room. These systems use refrigerants.
