One of the most important architectures used in deep learning is the convolutional neural network (CNN), a special type of neural net that is especially good at working with visual data. The classic use of CNNs is to set up multiple convolution layers (with some other important components in-between and after), specify an output goal, and train the neural network on many labeled examples.

A new technique dubbed "less-than-one-shot learning" (or LO-shot learning), recently developed by AI scientists at the University of Waterloo, takes one-shot learning to the next level. The idea behind LO-shot learning is that to train a machine learning model to detect M classes, you need less than one sample per class.
