Operations researchers have come to realize that most problems do not arise in isolation but are part of an interacting system. The process of seeking simultaneous interrelated solutions to a set of interdependent problems is planning.

## **Problems And Operations Research Principles and Solutions**

In operations research, a team of experts from the different fields first define the problem then represent that problem in the form of a set of mathematical equations. After that, the computer analysis of these mathematical equations is done to find a solution for the

The British/Europeans refer to "operational research", the Americans to "operations research" - but both are often shortened to just "OR" (which is the term we will use). Another term which is used for this field is "management science" ("MS"). The Americans sometimes

Simplex Method:

Example 1. Maximize  $z$   
 $= 3x_1 + 2x_2$ . subject  
to  $-x_1 + 2x_2 \leq 4$   $3x_1$   
 $+ 2x_2 \leq 14$   $x_1 - x_2 \leq$   
 $3$ .  $x_1, x_2 \geq 0$ .

Solution. First, convert  
every inequality  
constraints in the LPP  
into an equality  
constraint, so that the  
problem can be written  
in a standard form.
