Developmental biology is mainly analytical: researchers study embryos, suggest hypotheses and test them through experimental perturbation. From the results of many experiments, the community distils the principles thought to underlie embryogenesis. Verifying these principles, however, is a challenge.

## **Principles of Developmental Genetics - 2nd Edition**

Development and learning result from an interaction of maturation and experience. Early experiences have profound effects on development and learning. Development proceeds toward greater complexity, self-regulation, and symbolic or representational capacities. Children develop best when they have secure relationships.

During each period between molts, the larva is called an instar, i.e. the first instar is between hatching and the first molt. Both the size of the larva and the number of teeth on the dark-colored jaw hooks are an indication of which instar the larva has reached. After the second molt, the larva (now third instar) feed until ready to pupate.
