away, for example Apache CXF. Calling of secured WS is similar to normal. WSE in VS.NET would generate a web service proxy, which would contain two versions of classes: standard (inherits System.Web.Services.Protocols.SoapHttpClientProtocol) and secure (inherits Microsoft.Web.Services.WebServicesClientProtocol and has added "Wse" to end of name).

WS-Security: Web services the secure way - CodeProject

There was no particular standard for Web Service security (WS-Security) until April 2004, and Web service developers had to rely on the transport layer to provide security (via SSL/TLS from HTTP) or develop their own custom security mechanism sacrificing interoperability in the process.
