Unix And Linux System Administration Handbook

Adding new user accounts in Unix To create a basic Unix user account with default settings, you need to know only one thing: the username. The reason I say it as one word is because username (quite often referred to as "login") is not the actual name of the new person gaining access to your Unix system, but rather a single keyword uniquely identifying this user in your system.

As our series thus far has shown, defining the role of a "system administrator" defies simple categorization. System administrators are the ultimate generalists of computing whose skills fall roughly into six categories: Software management, such as testing, installing, updating, and removing. User management, such as adding and deleting users, and managing access controls. Server ...
