### Wetlands And Urbanization Implications For

Wetlands and Urbanization presents an integrated watershed approach to the scientific evaluation of the impact of landscape urbanization on wetland functions. It associates the source of impact (the landscape) with the sink (the wetland), relates findings to implications for future planning and management of watersheds and provides a model for future comprehensive investigations of wetland impacts from urbanization.

### Wetlands And Urbanization Implications For The Future

Urbanization affects wetlands in direct and indirect ways. Over the past several decades it has become increasingly apparent that unmanaged runoff is the primary threat to the country's watershed resources. Wetlands and Urbanization: Implications for the Future is the result of a ten year research project focused on the understanding and ma

on the effects of urbanization on runoff flowing to wetlands. Runoff can alter four major wetland components: hydrology, water quality, soils, and biological resources (US EPA 1993; Johnson and Dean 1987). Because impacts to wetland components are not distinct from one another but interact (US EPA 1993), it is

### WETLANDS AND URBANIZATION

The Puget Sound Wetlands and Stormwater Management Research Program (PSWSMRP) was a ten-year regional research effort intended to document the impacts of urbanization on wetlands. The wetlands included in the study were representative of those found in the Puget Sound Lowlands ecoregion, most likely to be impacted by urban development.

Urbanization has affected the inflows received by these wetlands thus having an impact on the wetland extent as well as wetlands condition. Temporal analysis of earth observation data further revealed that the natural vegetation cover has also been converted to built up along with the agricultural land.

### Urban expansion and its implications on prominent wetlands ...

Depressional forested wetlands in urban areas can function as important sinks for sediments, nutrients, and metals. As urban ecosystems become the predominant human condition, there is a critical need for data specific to urban forested wetlands in order to better understand the role of these ecosystems on the landscape.
